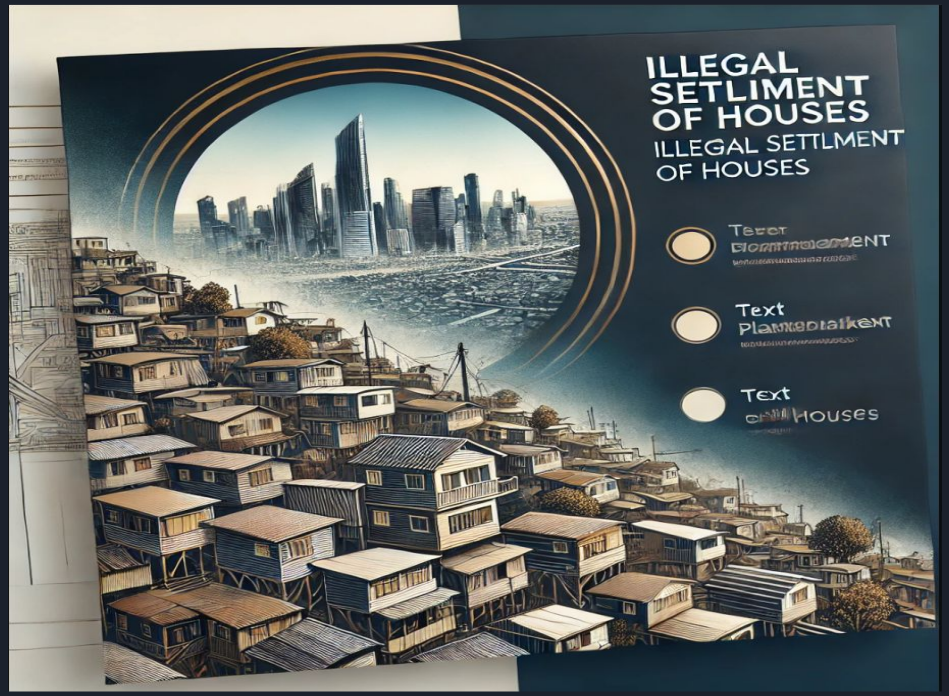
NIVAAS:

Bridging the gap between hopes and reality.



PROBLEM STATEMENT

The project aims to address illegal settlements living right on the green belts and the footpath by mapping affected populations, identifying affordable relocation options, improving living conditions, and facilitating access that everyone deserves to education, helping the government create a sustainable and humane solutions for the urban challenges like pollution and traffic.

OUR MOTIVATION

We want to build an app that tackles the issue of illegal settlements in cities across all places in very India because these settlements often expose people to life-threatening risk and poor living conditions. From heartbreaking photo of children injured or losing their lives due to the waterlogging and very unsafe roads to reports of of electrocution caused by faulty wirings, the dangers are severe and wide spreading. Families living in these areas also faces risk like road accidents and kidnappings, while their lack of legal recognitions prevents access to basic facilities and government aid. These issues not only jeopardizes lives but also perpetuates cycles of poverty and insecurities. Our app aims to bridgen this gap by gathering data, raising awareness, and facilitating solutions through technology and government collaboration, ensuring safer and more dignified living conditions for those affected.

Research

Link for Interviews (click here)

Summary: From our interviews, most people recognize the very illegal settlements as a very serious issue that needs top level attention, although some don't view it as a very urgent. Many see these settlements as a way to providing affordable housing for the poor, while the others feel they don't impact the city very much. When asked about the solutions, the majority suggested improving law enforcement to prevent new settlements and legalizing the existing ones with proper infrastructures. The primary challenges identified were a lack of resources and legal constraints, as well as public opposition to actions taken. People view the residents of illegal settlements as a citizen in need of better resources for victims of poor urban planning. They believe the government should be focussing on providing better living conditions, ensuring public safety, and preventing new settlements. The root causes were seen as a lack of an affordable housing and economic inequality, with the most viable solutions including offering alternative housing, improving the infrastructure in existing settlements, and enforcing stricter laws to prevent new ones. These findings duly highlights the need for an app that can bring the stakeholders together, raise awareness, and support practical solutions to improve the living conditions and address the issue effectively.

User Testing and Evaluation (Hi Fi)

The majority of the general public considers illegal settlements to be a serious problem, and they think the NIVAAS app may help by promoting open communication and offering accurate information. Although some users were uncertain, many felt the app's purpose was clear after recent revisions, and users found it straightforward to log in. Overall, the feedback was positive, with users finding the app helpful and effective. Several people appreciated the app for its user-friendly design and the way it simplifies complex issues. Others highlighted its potential to bring attention to a neglected problem and make a real difference in the lives of those affected. Many also praised its potential to encourage government action and collaboration with the community. These insights show that NIVAAS is making progress in addressing illegal settlements, but there is still room to improve its clarity and impact for all users.

Learning

(1) Determined the underlying causes, which include policy gaps, the shortage of affordable housing, and the rate of urbanization.
(2) Dsed case studies to comprehend local and international approaches to addressing unlawful settlements.
(3) Acknowledged the value of including communities in the decision-making process.
(4) Centered on making designs future-proof to handle urban expansion.
(5) Illegal settlements draw attention to weaknesses in urban governance and planning.
(6) Long-term success depends on cooperation between communities, NGOs, the commercial sector, and governments.

Reflection

Personal Growth.

(1) Gained a better knowledge of urban inequality and how it affects illegal settlements.
(2) Improved capacity to evaluate difficult problems and suggest workable answers.

Team Dynamics.

(3) Efficiently utilized individual abilities to get greater results while working in a multidisciplinary team.
(4) Treated dissenting viewpoints with respect and evidence-based dialogue.

Future Application.

(5) Create and put into use smart technology for preventing and managing settlements.
(6) Apply knowledge to upcoming positions in creative city planning and sustainable urban development.
